

There are 3 files for each image, in each size. The file name works as follows;

- * the number following the name is the size (24 pixels or 16pixels)
- * anything after the size represents the state;
 - * an image with nothing after the size is a normal state
 - * an image with a _h after the size is a hot state
 - * an image with a _d after the size is a disabled state
